New Miele solutions for dental health – efficient, networkable and presented live at IDS

- ▶ Thermal disinfectors with connected control and optional glass door
- ▶ Innovative tray and container system for disinfectors and sterilisers

Gütersloh/Cologne, December 16, 2024. – To provide dental practices with comprehensive support in their day-to-day work, Miele will be introducing a fully optimised system concept in April 2025 – from new thermal disinfectors and an innovative tray and container system to the Miele MOVE Med Dent+ online portal, which makes it easier to document process data. All of the products and services will be showcased live for the first time at the Miele stand at IDS 2025 in Cologne (March 25 to 29, Hall 10.2, Stand R020 S021).

Under the slogan “Dental Health Is Your Focus. Making You Smile Is Ours”, Miele will be presenting solutions that will help practices to make savings, reduce the burden on staff and streamline recurring processes. Various 60 cm wide undercounter models will be available for the first time, offering up to 24 programmes as well as five free programme slots for individual requirements. With a new control system and a convenient touch display, the disinfectors are easy and intuitive to use – with the aid of helpful pictograms. All models are equipped with wash cabinet lighting as standard to make loading and unloading easier. During reprocessing, an optional glass door provides an unobstructed view of the instruments. A patented variable-speed pump adjusts the water pressure in the new thermal disinfectors as needed, thus reducing consumption.

The two new 65 cm wide thermal disinfectors in the SlimLine series provide even more space and are also equipped with the intelligent variable pump technology. They have a wash cabinet volume of 252 litres and an ergonomic loading height of 85 centimetres, making them ideal for the requirements of large practices and dental care centres. These machines feature three levels which can be equipped with modules for all standard instruments; for example, with up to three injector modules for cleaning inside a total of 66 lumened instruments. Furthermore, a load comprising 24 dental trays and other instruments, for example, can be reprocessed in one programme cycle.

The Miele thermal disinfectors and the sterilisers in the Cube and Cube X series can be networked using the Miele MOVE MedDent+ online portal. The Miele platform facilitates machine management in dental practices and, because the reprocessing data is saved

automatically in the Miele Cloud, it also makes it easier to document processes. Any number of machines can be connected and access for employees is unlimited. Relevant notifications are sent straight to a smartphone, tablet or PC if necessary. For example, staff can be notified when a machine is ready to be unloaded, thus saving them making any unnecessary trips.

Miele's new EasyStore tray and container system offers extra efficiency in every phase of reprocessing. All of its components are coordinated with each other, enabling fast, cost-effective, sustainable reprocessing. Consistent use of the system eliminates the need to place each instrument in the machine individually, saving huge amounts of time – particularly when preparing for the sterilisation process. It also cuts down considerably on the costs for single-use packaging.

Miele's system solution for dental care centres and practices is rounded off with an optimised portfolio of process chemicals, tailored to the requirements of the individual machines and reprocessing phases. The ProCare Dent system includes a mildly alkaline liquid cleaning agent which is also suitable for removing residues from transmission instruments. Its formula has been improved significantly, while ensuring that it is still just as reliable and easy to use.

Company profile: Miele is recognised as the world's leading supplier of Premium domestic appliances, with an inspiring portfolio for the kitchen, laundry and floor care. The company also offers machines, systems and services for use in hotels, offices, care and medical technology. Since its foundation in 1899, Miele has lived up to its brand promise of "Immer Besser" in terms of quality, innovation, performance and timeless elegance. With its durable and energy-saving appliances, Miele helps its customers to make their everyday lives as sustainable as possible. The company is still owned by the two founding families Miele and Zinkann and has 15 production plants, eight of which are in Germany. Around 22,700 people work for Miele worldwide and the company's most recent turnover was 4,96 billion Euro. The company has its headquarters in Gütersloh in Westphalia.
